## REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the claimed fuel-air mixture supply device with a combustor liner connected to a pilot fuel injection unit further connected to a prevaporizing, premixing main fuel injection unit wherein the inner wall and the outer wall define a combustion air passage, an intermediate wall is disposed in the combustion air passage so as to divide an upstream part of the combustion air passage into an inner combustion air passage surrounding the inner wall, and an outer combustion air passage surrounding the intermediate wall, fuel injecting holes are formed in the intermediate wall to inject fuel radially inward or outward so as to cross air currents flowing through the combustion air passage into the inner combustion air passage of the combustion air passage, and an atomization lip is formed in a tail part of the intermediate wall to promote the atomization of fuel adhering to the tail part at a downstream edge of the intermediate wall is not found in the prior art either singly or in combination. This considered patentably distinct feature is found in each of the independent claims 1 and 2. The closest prior art is considered Markowski (US 3,811,277) which teaches an annular burner with mixing and combustion zone. Other prior art references cited in this action are considered to teach one or more elements of the claimed inventions, but do not provide the motivation to combine those teachings to obviate the claimed invention in light of the closest prior art considered reference.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
